LuSH-101 file locations are located by default at:

- **Windows -** c:\Users\[user_name]\AppData\Roaming\D16 Group\LuSH-101
- **MacOS -** HD/Library/Application Support/D16 Group/LuSH-101/

If you experience an issue locating the folder where D16 presets are stored, you can always find the location by loading an instance of LuSH-101, and on the GUI click Options on the top left side. In the new window that appears, click the tab labeled "Presets". The Preset Directory location will be shown under the bar labeled Author.

Regardless of your operating system, each LuSH-101 folder has a subfolder for Presets which are labeled accordingly. Copy and paste the corresponding files into the applicable subfolders.

For Windows:
– Navigate to c:\Users\[user_name]\AppData\Roaming\D16 Group\LuSH-101

All set! You're ready to enjoy the presets!

You will find that each patch has velocity and modwheel assigned (and often aftertouch/channel pressure) which provide substantial expressiveness and playability.

LuSH's strengths lay in its world class filter and authentic oscillators. Therefore, it can still be very CPU heavy. Please make sure that the multi-core option is enabled in LuSH-101, which is contained within the options panel in the upper left hand corner of the interface. Other options to reduce CPU load are to reduce the polyphony or the number of voices. Reducing release times, reverb tails (or disabling the reverb) can help as well.

AEON took many months to complete and I am quite happy to finally share it with others; I very much hope that you enjoy using it as much as I enjoyed creating it.
